

NFT Collections Generator Pro

NFT Collections Generator Pro is a smart and powerful generative art tool, you can simply add your layers and with one click you can make as you want from NFTs based on your layers(Generate 5k, 10K, 20K... NFTs with one click) with Metadata files.

This tool is for generating images that could be used as NFTs.

You can add up To 10 layers inside our tool, these layers can be eyes, caps, mouths, backgrounds...

You can set the size of the NFTs, the output format is PNG.

You can use our tool to offer a service in Fiverr or any freelancing platform and make extra income.

Features

- Up to 10 Layers
- Export NFTs as PNG
- Generate MetaData Files
- Fast Generation

Run The Software

Unzip the main file and go run **NFT_Generator.exe**:

NFT_Generator.e
xe

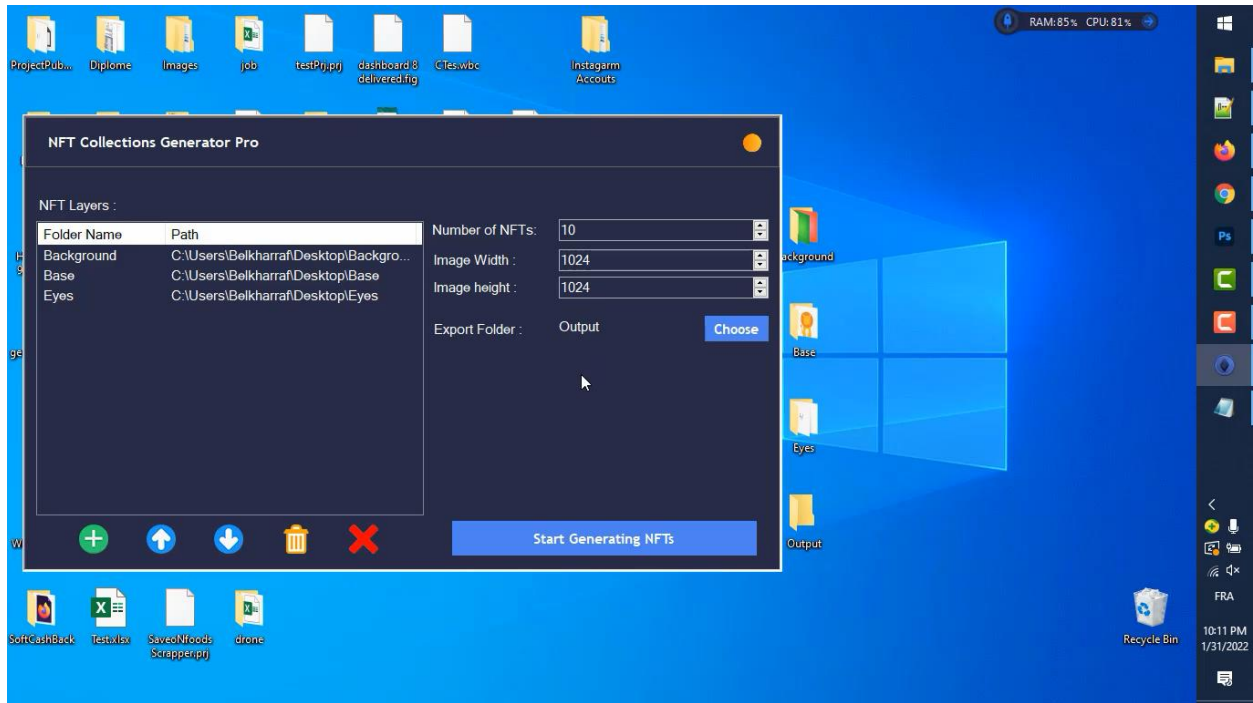

NFT_Generator.e
xe.config

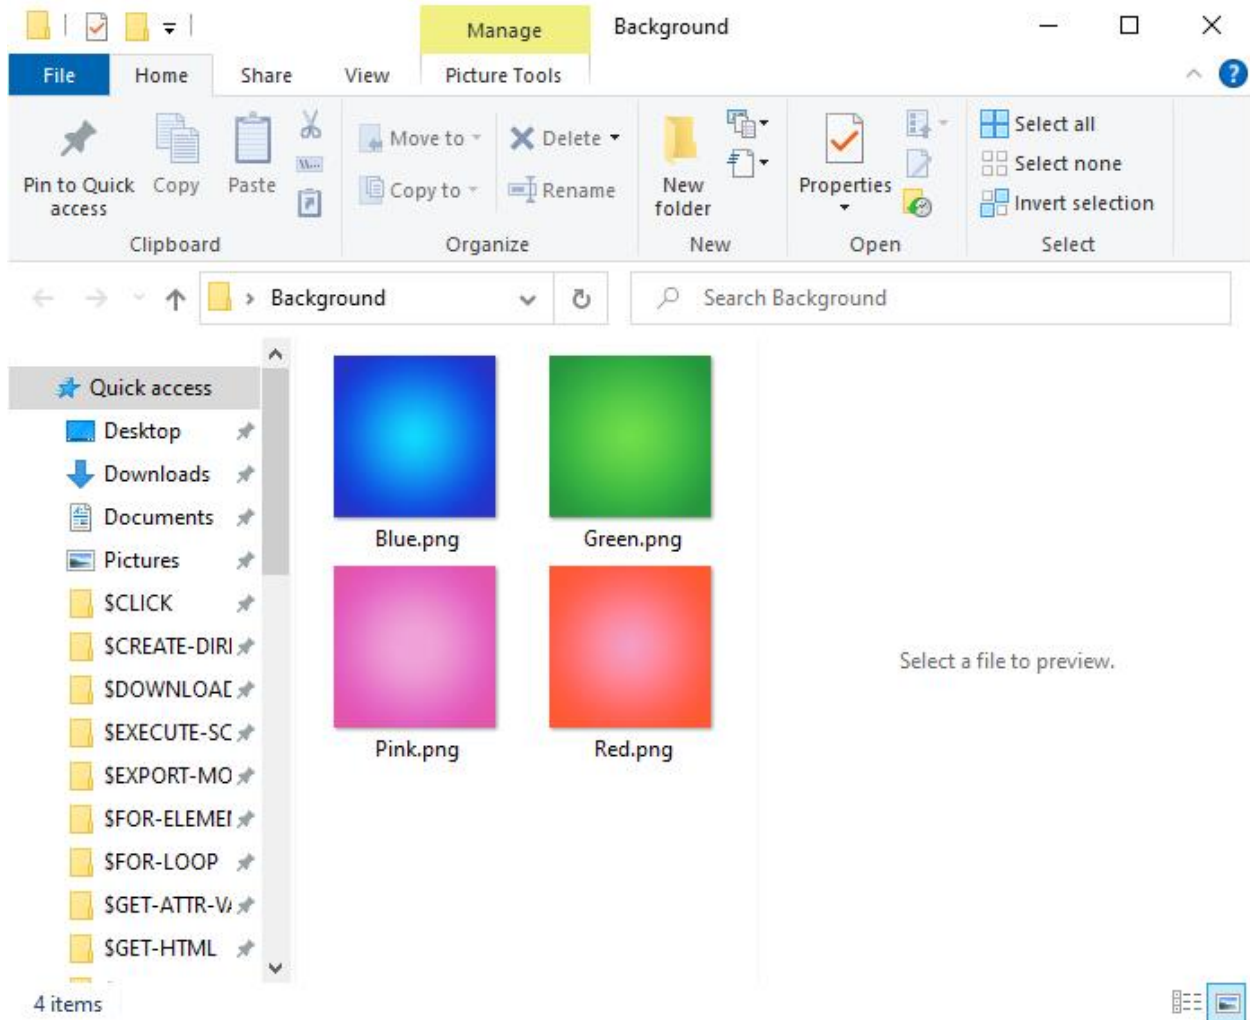

NFT_Generator.p
db

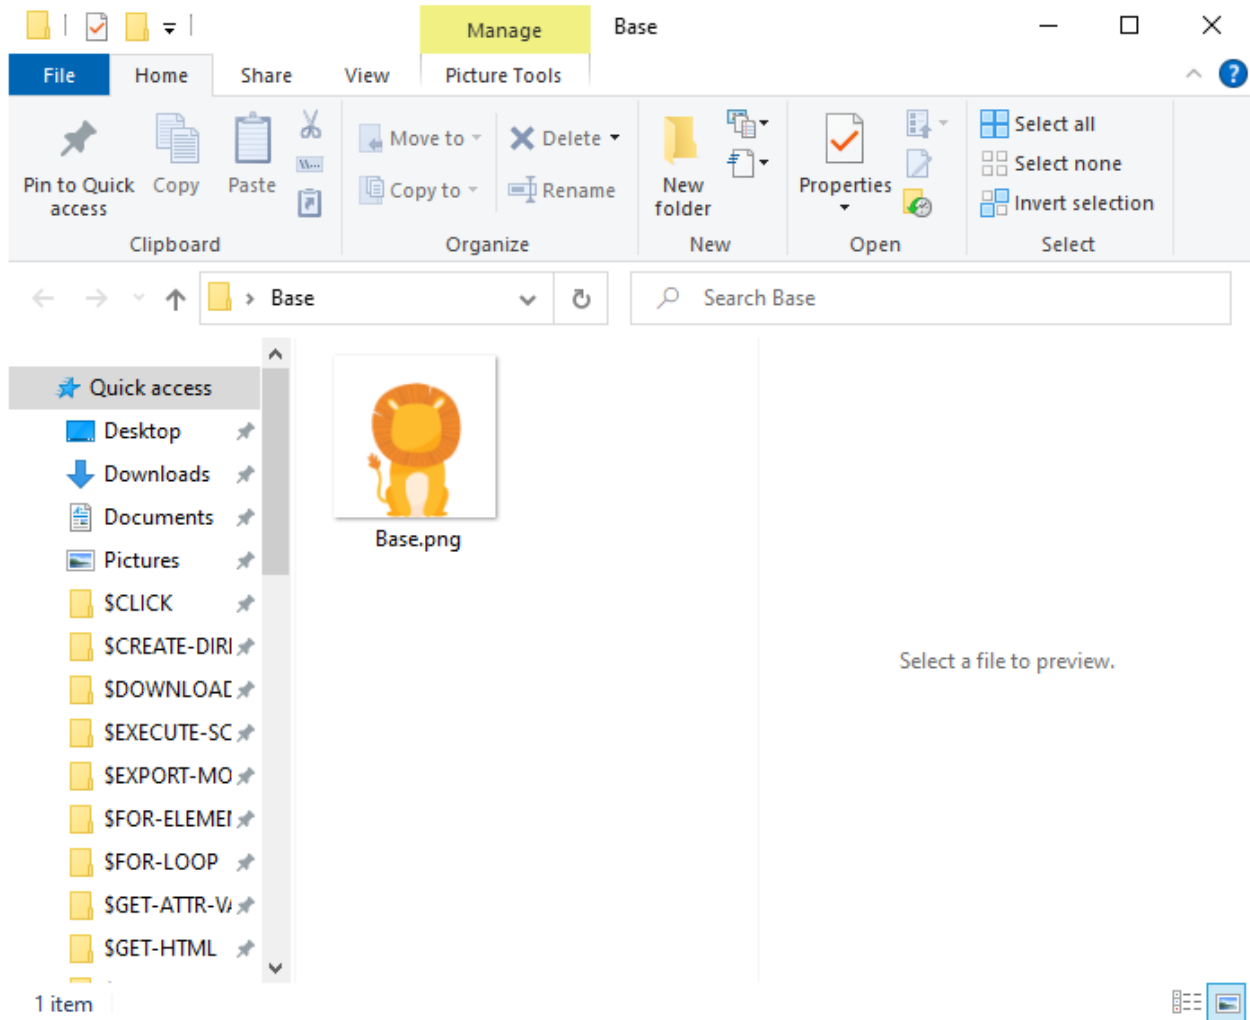

The main window of the tool :

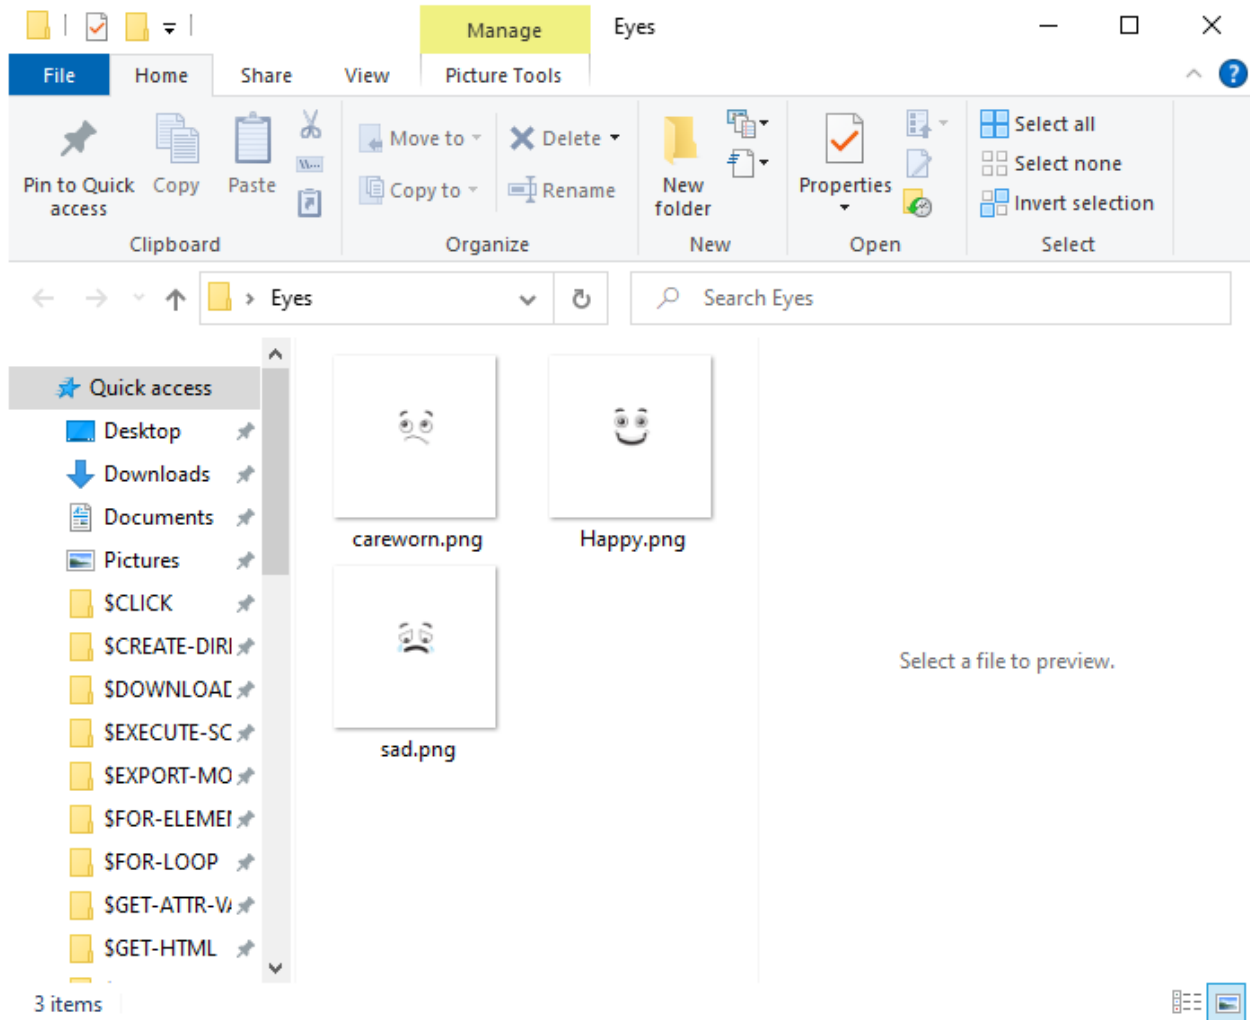

You can simply add your layers, set the number of generated NFTs, the NFT sizes and the output folder.

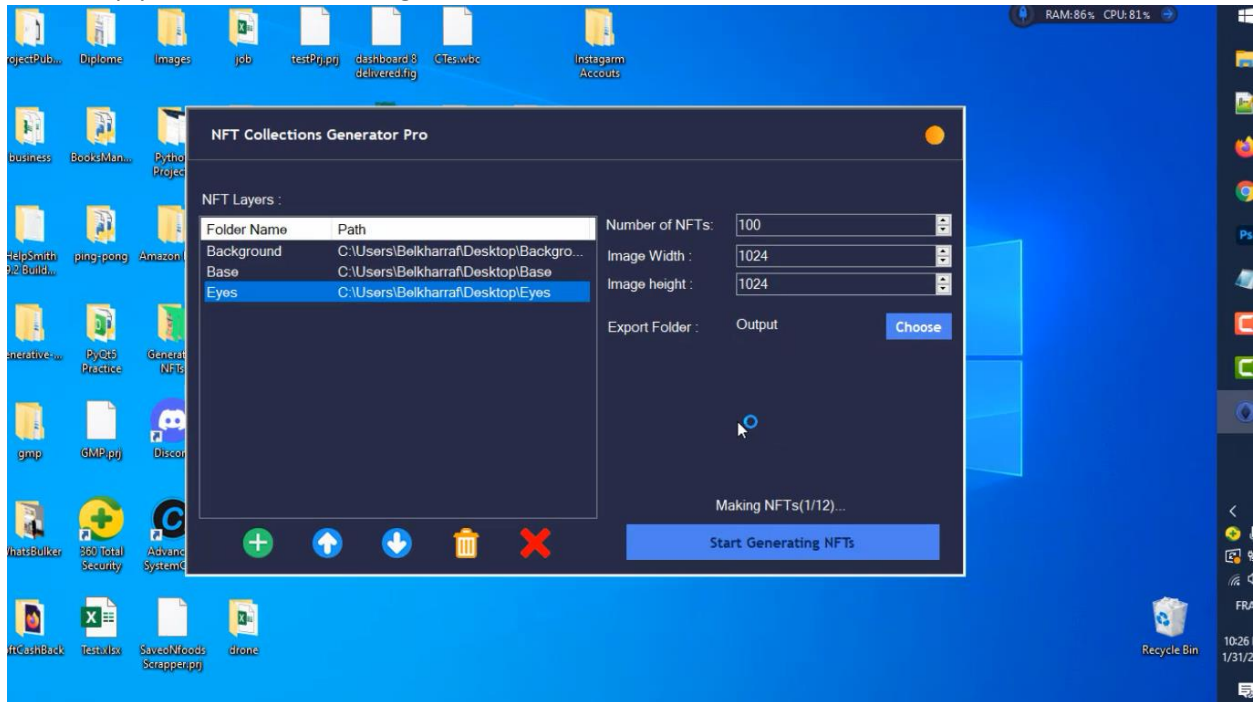

For the layers, the first that will be painted must be first selected like backgrounds, then Base figure then eyes as an example :

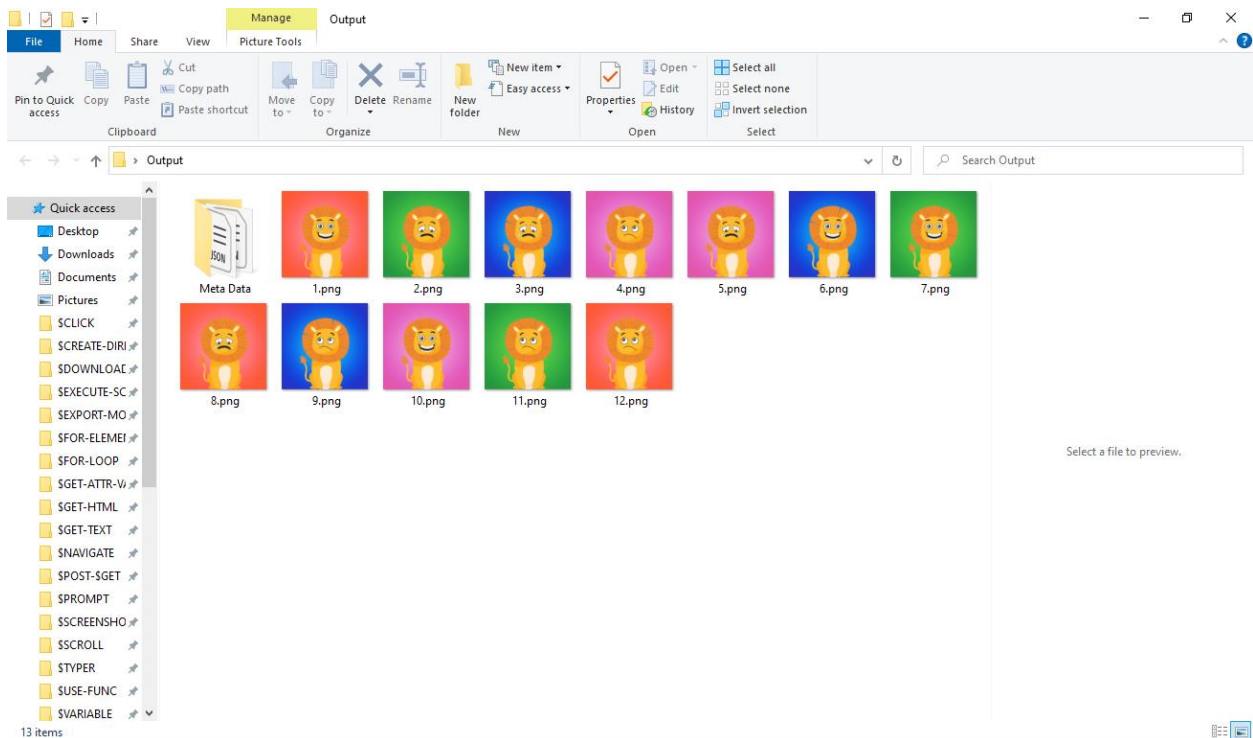

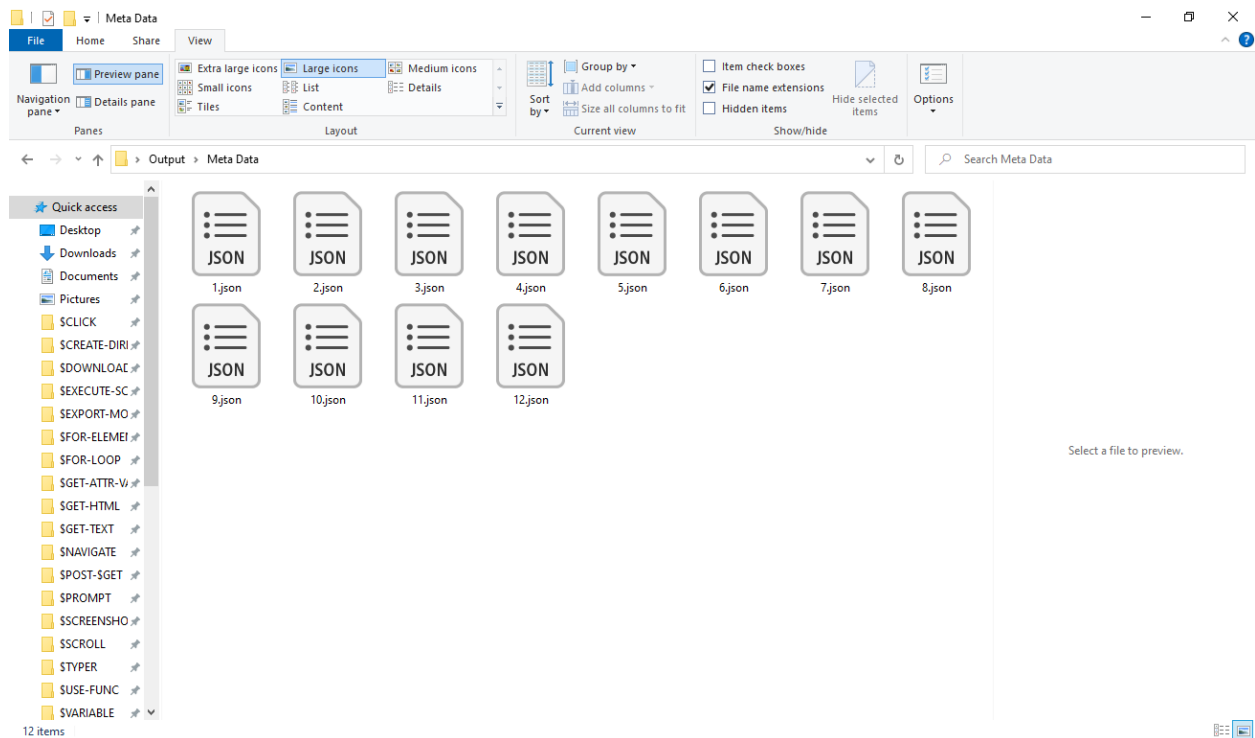

Then simply click Start Generating NFTs :

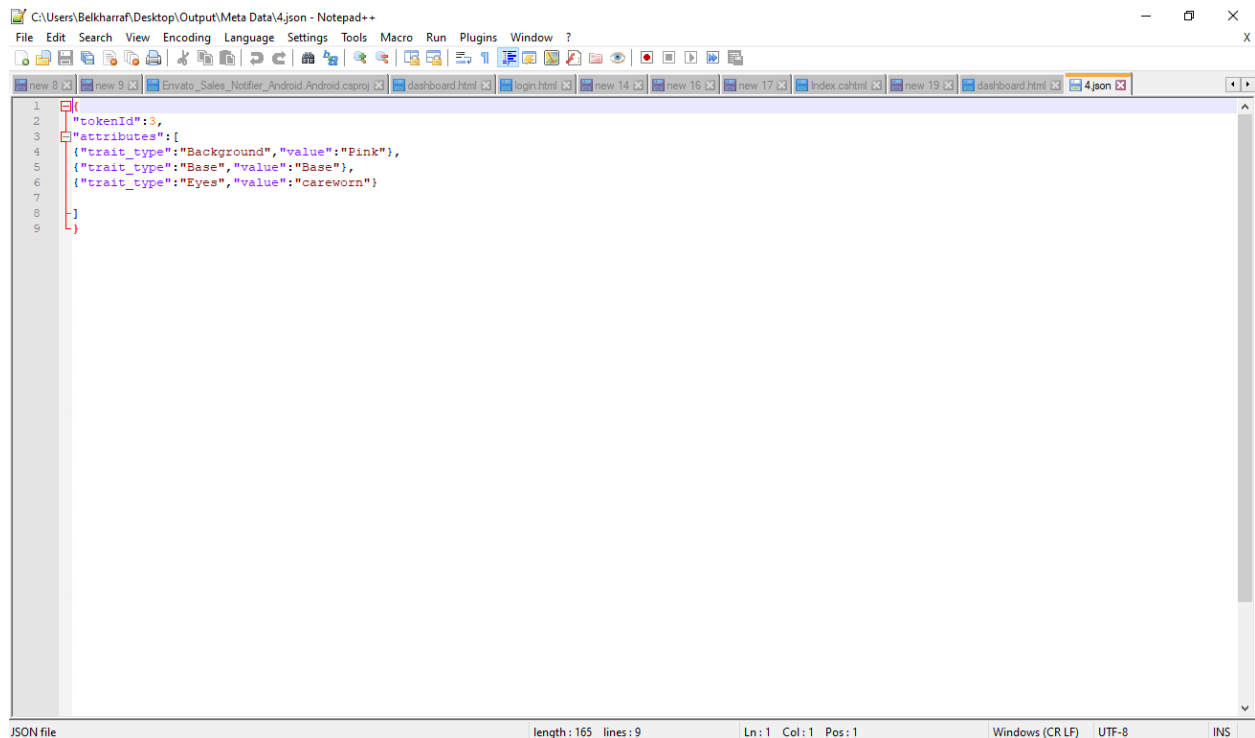

And the output is :

The tool also generate MeataData Files, you will find a folder named Metadatfiles :

And on each file you see the background used, the name of eyes, all layers used :

Important : The name of layers is the value saved inside the metadata files, which means a background named red.png => the value that will be saved on metadata files is **Background : Red**.

Background => The name of folder

Red => the name of files.
